

## ImiSight for Utility Maintenance and Emergency

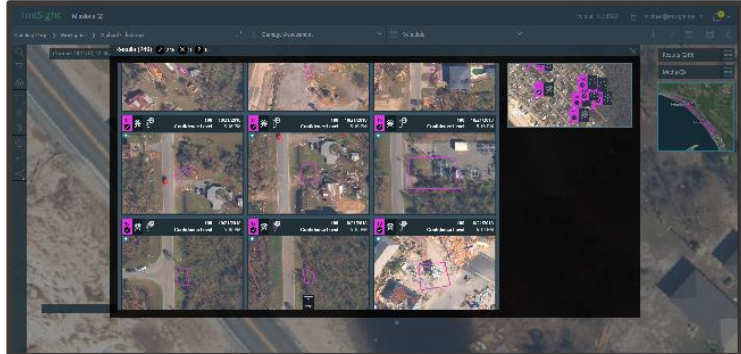

### 1. Simple AOI Selection

Upon selecting the area of interest (AOI) where the disaster occurred, visual imagery data from satellite, aircraft, UAV and CCTV sensors is uploaded or streamed to ImiSight.

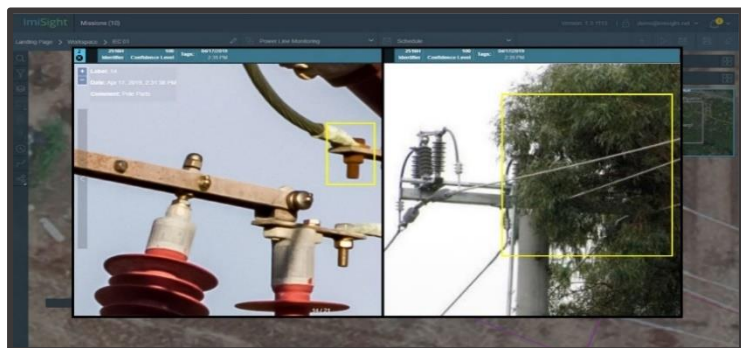

### 2. Rapid Damage Assessment

After an breakage event, new images are collected and uploaded. ImiSight autonomously detects damaged objects, identifying changes, road blockages, and fallen poles. This enables emergency coordinators to promptly gauge damage,

### 3. Actionable Reports, at The Right Time

Damage estimates are made for missions with pre-defined polylines as soon as aerial images are loaded into ImiSight. Assessments and recovery efforts are continually monitored and updated with new data.

### 4. End to End Maintenance Solution

Periodic maintenance & inspection missions support:

- Vegetation management
- Pole parts inspection this aids field team managers in prioritizing maintenance and optimizing work.

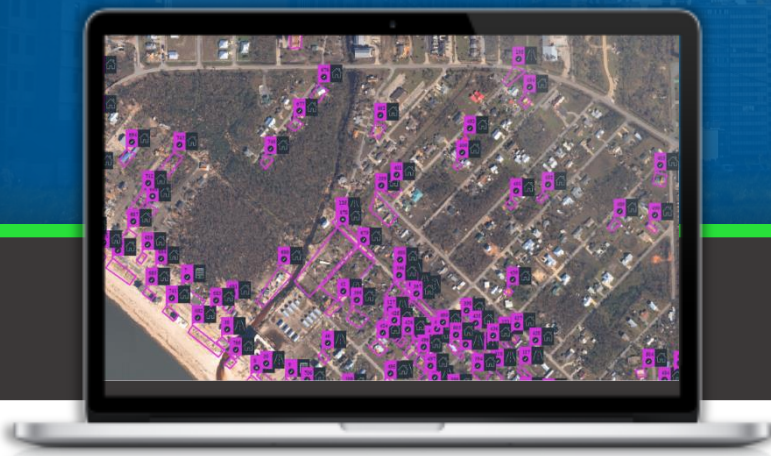

ImiSight delivers precise geo-located, timestamped reports, capturing valuable insights from current and historical data.

## Unlock Insights with ImiSight for: **Utility Maintenance & Emergency Response**

ImiSight for electricity transmission and distribution networks leverages cutting-edge AI for advanced monitoring and smart incident management.

It revolutionizes monitoring with cutting-edge technology, providing real-time alerts. Elevate your operations to new heights.

**Unleash the Power of Smart Monitoring and Incident Management.**

### **Empowering Insights for Informed Action**

Leverage robust detection for actionable insights. ImiSight transforms utility maintenance operations and incident response data into informed action.

### **For Every Role**

Incident response managers, analysts, operational teams, researchers and managers – access valuable information, grasp surroundings better.

### **Experience the Future of Analysis**

Step into the future of data analysis with our web-based AI & algorithms app. Explore a limitless world of possibilities as you unlock the true potential of your data.
